- Estimated time of restoral is 09/12/17 at 1900 hours.

# WEATHER OF CONCERN

## Weather of Concern

- Showers and thunderstorms will be possible in the mountains of Northern California through Thursday.

## **Active Weather Warnings, Watches and Advisories by County:**

- <https://alerts-v2.weather.gov/counties/CA>

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

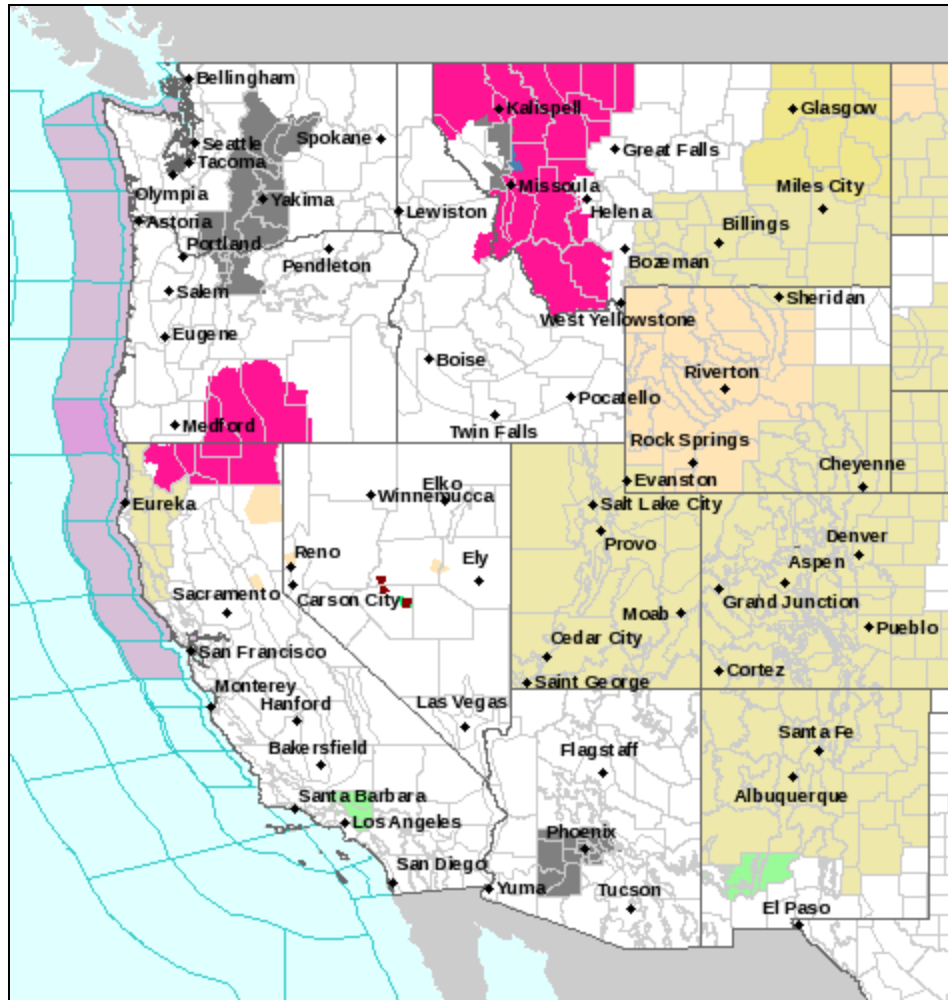

Low pressure off the Central California coast continues to pull moist unstable air into Northern California. An area of showers and thunderstorms moved northward through the region last night and this morning. Afternoon development will mainly be from the Cascade-Sierra range east. A direct hit from a thunderstorm could yield 0.25-0.50 inches of rainfall. On Wednesday, showers and thunderstorms will mainly be from Lassen and Shasta Counties south, with isolated activity on the west side from Trinity County south. A low pressure trough and cold front will move in from the north Thursday with gusty south-west winds and more showers and thunderstorms, mainly in the northeast early in the day and in the east and southeast later in the day. On Friday northwest-north winds will gust to 25-30 mph in wind-prone areas as cooler and drier air moves in behind the front. A weak dry low pressure trough will pass through the region Saturday, and a stronger low pressure trough and cold front will reach the north coast late Sunday. Ahead of this strong front south-southwest winds will gust to 25-35 mph over the higher terrain and east of the Cascade-Sierra crest. The front and trough will move through Monday -Tuesday with gusty southwest-northwest winds. Showers and thunderstorms are expected across the northern half of the region.

## **SOUTHERN CALIFORNIA**

An upper level low pressure area stalled off the central coast will begin to move northward tonight and Wednesday which should lead to a downward trend in thunderstorm activity. However, scattered thunderstorms will still be possible over the Sierras north of Sequoia N.P. and across Monterey into San Benito Counties. These storms will continue to track westward during the afternoon. Isolated storms and cumulus buildups may occur over the desert sides of the Angeles and San Bernardino N.Fs. Temperatures today will be slightly cooler, but still well above normal, with highs in the 90s in the valleys. Wednesday, isolated thunderstorms will be possible in the Sierras and in the Monterey County, but most other areas will see mostly sunny skies in the afternoon. A trough will move into the area Wednesday night, leading to much cooler weather for the end of the week and into the weekend. Widespread night and morning stratus will return to the coastal valleys and even the lower coastal slopes by Friday morning. Temperatures will likely drop into the 60s along the coast with 80s common in the valleys. Afternoon west winds of 20-30 mph will be possible in and near the desert Thursday and Friday. Minimum relative humidity (RH) readings will likely drop back into the teens in the mountains above 4,000 feet by the end of the week. Expect less windy and slightly warmer weather this weekend. No offshore winds are expected the next 7-10 days.
